

TO LIVEN UP YOUR SPACE

AIR PLANT

- No pot or soil needed
- Place in bright filtered light
- Humid climates: water every 10 days
- Dry climates: water every 5 days

TO WATER

Fill a basin, bowl or sink with water and submerge plants for 10 minutes. Remove and spread plants on a towel to dry.

ALOE PLANT

- Plant in wide container with well-draining potting mix
- Place in indirect sunlight or artificial light
- Make sure water drains through pot completely
- Let soil dry 1 to 2 inches deep between watering

TO WATER

Fill a basin, bowl or sink with water once a week, making sure the water drains completely. Let soil dry between watering.

SNAKE PLANT

- Plant in deep container with well-draining potting mix
- Place in bright indirect light
- Water every two weeks with about ¼ cup of water
- Water around the edges, not over leaves
- Let soil dry out completely between watering

TO WATER

Water every 14 days, using about a ¼ cup of water. Make sure to water around the container edges only.

POTHOS

- Plant in deep container with well-draining potting mix
- Place in bright indirect light
- Water every two weeks with about ¼ cup of water
- Water around the edges, not over leaves
- Let soil dry out completely between watering

TO WATER

Water every 14 days, using about a ¼ cup of water. Make sure to water around the container edges only.
